ABSTRACT:

PROBLEM TO BE SOLVED: To perform various selling methods in relation to the peripheral device of a product connectable to the Internet such as a personal computer digital television game machine.

SOLUTION: A peripheral device purchaser accesses the user information database registration picture of a peripheral device seller with a WWW browser and selects and registers product information and a service desired by the user. A user information database 22 selects a peripheral device purchaser desired service menu item from a related merchandise information database 24, transfers the item to a purchaser client terminal 12 from a WWW network 14 and subsequently registers an ID number (terminal serial number) and a password as user registration. The change of a selected service, the addition/elimination of a charged service, various services and the version up of driver software, etc., performed by the purchaser after the registration are combined through the user information database, and then, performed at the same time with quality verification.
